Comparing current and future states

Complete

A core part of conducting a high-impact gap analysis is comparing the current state to the future state.

Let's see how that looks in the context of Flexi Yoga.

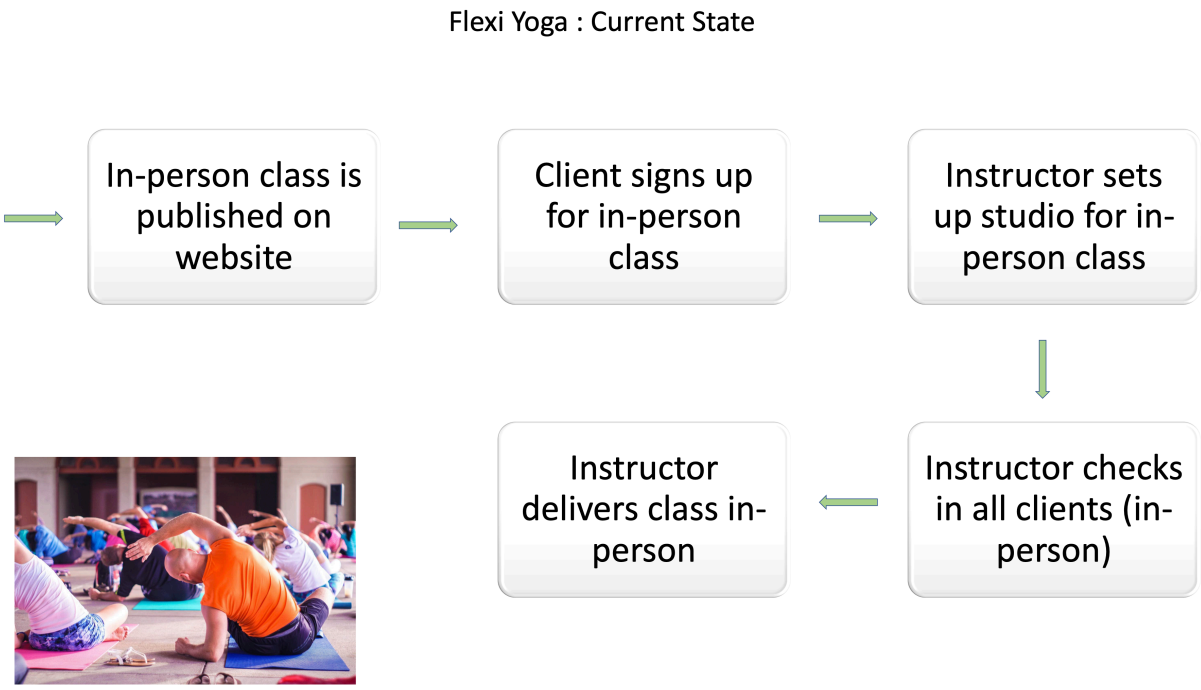

Comparing the current state and future state of Flexi Yoga (as seen in the previous section), the following **strategic gaps** emerge:

Strategic gaps:

1. **Client base**: The current client base needs to be expanded to achieve an increase in footfall from 100 to more than 110 students per day, also increasing active members from 2,000 to more than 2,200.
2. **Class attendance**: The attendance rate for booked classes needs to increase from 80% to 90%, significantly reducing the no-show rate.
3. **Class format**: Presently, the studio only offers in-person classes—the future state mandates the requirement for a robust, user-friendly virtual platform for both live and recorded sessions, which the current state lacks.
4. **Staff efficiency**: The current state does not address the staff's ability to handle tasks effortlessly or stay updated on the latest yoga practices and technology—elements which form part of the future vision.
5. **Infrastructure**: The future state requires the functionality to host online classes, which is not accounted for in the current studio setup and processes, indicating a substantial gap in infrastructure and technological capability.

These gaps all stem from a single process that needs updating: **running an in-person yoga class.**

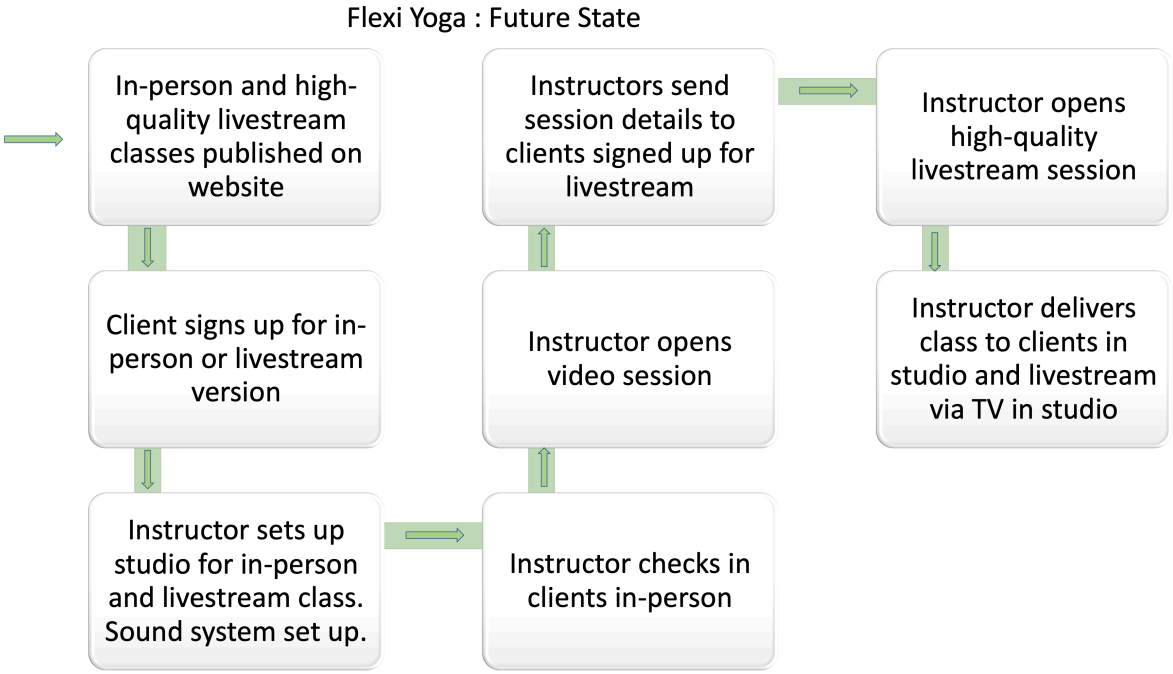

So, it becomes necessary to model this process to get a clear picture of all of the steps and resources involved in its current state. Here's what that looks like:

Current state process model

1. In-person class is published on website
2. Client signs up for in-person class
3. Instructor sets up studio for in-person class
4. Instructor checks in all clients (in person)
5. Instructor delivers class in person

Informed by the defined goal and elicited requirements, a desired future state of this process is created. Here's what that looks like:

Now that the current and future state of this process are depicted, it is time to compare them and identify the gaps. This gap analysis is performed on the **operational level**.

Test yourself!

After reviewing the current and future state processes above, can you spot the gaps?

Click here to reveal the gaps!

- **Class delivery**: The current state only offers in-person classes whereas the future state includes high-quality livestream classes. The studio lacks the technology, setup, and training required to deliver livestream classes at present.
- **Class registration**: Currently, clients can only sign up for in-person classes. To accommodate livestream sign-ups, the studio's website or registration platform must be updated with virtual class options and different payment methods if necessary.

sound systems and filming equipment. Currently, the studio only facilitates in-person classes.

- **Client check-ins**: In the future state, instructors will open a video session and send session details to clients attending via live stream, but currently, check-ins are only managed in person.
- **Class conduct**: In the current state, the instructor delivers classes only to clients in the studio. In future, they will need to deliver the class simultaneously to both in-person clients and those attending through the live stream. This will require new skills and adaptations in class delivery.

There are many ways to document the current state, future state, and gaps. One commonly used format is a table that compares each element of the current and future states, like the one below:

Current state	Future state	Gap(s)
The studio offers two in-person classes per day, in the mornings and evenings, seven days a week, each accommodating a maximum of 25 students.	The future state requires a diverse class schedule throughout the day and week to cater to various lifestyles, both for in-person and virtual sessions.	The studio lacks diverse class schedules and does not yet offer virtual sessions.
The class sign-up process is currently manual, via phone calls or in-person visits to the studio.	The future state needs a smooth and effortless sign-up process for both in-person and virtual sessions.	The studio lacks a streamlined, digital sign-up system.
The studio operates with an average footfall of 100 students per day, and has 2,000 active members.	The future state aims to increase the average daily footfall to over 110 students and active members to more than	The studio needs to grow its client base and increase daily footfall.

	2,200.
